MONTHLY WEATHER MAP

March 1961

General Summary of Weather Conditions

Northern Canada and the Atlantic Provinces were unseasonably cold in March 1961, the result of a persistent low pressure area anchored over the eastern Arctic which maintained a flow of cold arctic air over these regions. By contrast the grain areas of the Prairie Provinces experienced much above normal temperatures for March.

March precipitation was generally light throughout Canada except along the British Columbia coast and in the Atlantic Provinces. On the east coast precipitation totals were swelled by frequent snow storms which blocked roads and hampered communications in a number of communities.

In the Province of British Columbia March weather was characterized by a steady parade of storms that moved across the province from the southwest. The storm activity began early in the month and resulted in keeping mean temperatures above normal for the fourth month in a row. The second half of the month was warmer than the first with most stations reporting the highest temperature for the month on the 29th or 30th. Mean temperatures for the month reached 46 at a number of British Columbia stations including Vancouver and Victoria. This was the highest mean reported anywhere in the country for March 1961. There were temperature excesses ranging from two to four degrees in the southern interior and of one to two degrees in the coastal districts. In marked contrast with the remainder of the province Fort Nelson, in the far northeastern corner of the province, reported a five degree deficiency.

Frequent storms resulted in above average precipitation in the coastal regions of British Columbia with a few stations receiving more than twice the normal for the month. Estevan Point on Vancouver Island received the greatest amount of precipitation of any place in Canada with 18.5 inches, which was 71 per cent above normal. Precipitation was also above normal in the southern interior valleys although a few stations had deficiencies. In the central interior there were generally deficiencies ranging to thirty per cent.

Pacific disturbances moving eastward across the Prairie Provinces during March prevented any major outbreaks of arctic air so that the month's weather was mild, dry and windy. As might be expected at this time of the year, the last half of the month was warmer than the first half with most stations experiencing the highest temperature for the month sometime during the last week. Mean temperatures for the month were generally six to eight degrees above normal in the southern sections of the three Prairie Provinces, two to five degrees above normal in the central sections and in the Peace River district of Alberta. The only exception to the general pattern was in the northern section of Manitoba where there were small deficiencies, of which the greatest was two degrees at Churchill.

March precipitation was light throughout the Prairie Provinces with a few stations reporting only a trace for the month. Deficiencies ranged to eighty per cent in the grain areas of Alberta and Manitoba and to one hundred per cent in Saskatchewan. Many stations in the Peace River district had deficiencies but north of Peace River itself there were excesses of twenty or thirty per cent. Prince Albert was exceptional in having just over twice the normal fall and there were also large excesses in the northern half of Manitoba.

The first half of March was stormy in southern Ontario. Measureable snow was recorded at most southern Ontario points on at least seven of the first fourteen days of the month. On the 8th and 13th snow and rain were mixed with freezing rain in many localities. For the month as a whole the storminess of the first half was balanced by settled weather during the last half of the month, so that precipitation for the month was somewhat below normal at most southern Ontario stations. A few stations experienced excesses. In northern Ontario the majority of the precipitation fell during the second half of the month, especially the last week. In the northwestern districts of Ontario there were deficiencies of March precipitation ranging to eighty per cent while in the remainder of northern Ontario there were mostly excesses. Of these the greatest was at Lansdowne House which received over three times the normal fall, while Moosonee also received over twice the normal fall. These large excesses were somewhat offset by small deficiencies at scattered stations throughout the northern districts.

March was mild throughout the month in southern Ontario with new maximum records for the day being set at various stations on the 2nd, 3rd, 6th and 17th. The highest temperature in the province was reported at Niagara Falls on the 27th when the mercury reached 74 degrees. Mean temperatures for the month were generally two to four degrees above normal throughout most of southern Ontario, although along the valleys of the Ottawa and St. Lawrence Rivers temperatures were normal or one degree above normal. The greatest excesses anywhere in the province were recorded at stations in the extreme western part of the province where they ranged from eight to eleven degrees while other northern Ontario districts experienced excesses of two to eight degrees.

In the Province of Quebec March mean temperatures were generally seasonable aside from mild weather on the 3rd and 4th and some subnormal temperatures in most parts of the province during the second and third weeks. In most of the southern parts of the province mean temperatures for the month were within one degree of normal although the Gaspe Peninsula was cool with deficiencies of mean temperature of two or three degrees. In the central interior of the province there were mainly excesses of one or two degrees, except at Fort George where the excess was five degrees. Temperatures were cold in the far north where Fort Chimo reported a deficiency of eight degrees and Cape Hopes Advance one of six degrees.

March rainfall was below normal throughout the Province of Quebec, but this was offset by much above normal snowfall. Most of the snow fell during the first half of the month with a particularly heavy fall on the 9th. The storm left six to nine inches of snow along the St. Lawrence River Valley while in the Lake St. John area, Roberval reported fourteen inches and Mont Joli, further down the St. Lawrence River had twelve inches. Precipitation totals for the month averaged about twenty per cent below normal in the Montreal and Three Rivers area, and about fifty per cent above normal on the Gaspe Peninsula. In the Lake St. John area the range was from deficiencies of forty per cent to excesses of forty per cent with the average about normal. In the central interior of the province there were deficiencies averaging about fifty per cent while in the far north Fort Chimo reported an excess of thirty-eight per cent in contrast to a deficiency of thirty-three per cent at Cape Hopes Advance.

March brought the most severe weather of the winter of 1960-61 to the Maritime Provinces as the region was swept by one storm after another. Secondary storm centres developing along the southeast coast of the United States deepened as they moved northeastward, producing heavy snowfalls and high windspeeds over the Atlantic Provinces. As an example of the incidences of storms, Sydney reported over six inches of snow on each of the 7th, 15th, 16th, 20th, 25th and 26th, while on the 9th Campbellton reported 19.6 inches of snow within the twenty-four hour period. Drifting snow following these storms made it difficult to maintain rail, water and road transportation especially on Prince Edward Island where at times the roads were completely blocked. Total precipitation for the month ranged to two or three times normal on Cape Breton Island, with smaller excesses on Prince Edward Island, in the northern section of Nova Scotia and along the east coast of New Brunswick. Southern New Brunswick and southeastern Nova Scotia experienced precipitation deficiencies ranging to fifty per cent, averaging about thirty per cent. The total snowfall of seventy-one inches for the month at Sydney was the highest ever recorded in March in the eighty-eight years for which records exist at that station.

Frequent gales brought cold weather to the Maritime Provinces. Mean Temperatures averaged four to six degrees below normal in Prince Edward Island, the northern part of Cape Breton and the area around Moncton. Elsewhere in the Maritime Provinces there were deficiencies of one to three degrees.

March snowfall was heavy on the Island of Newfoundland. St. Andrews recorded 45.6 inches and Gander 42 inches, against normals of 8 and 18 inches respectively. On the 11th a new record for one days snowfall was set at Gander when 16 inches fell. Precipitation for the month was generally fifty to one hundred per cent above normal, except in the northern part of the Island where there were deficiencies. Along the Labrador Coast there were generally deficiencies averaging about thirty per cent. March mean temperatures were two to four degrees below normal throughout the Province of Newfoundland.

March weather was cold in the Yukon Territory, deficiencies of mean temperatures ranging from nine degrees at Snag to two degrees at Teslin. Precipitation totals were normal for the month for the Territory as a whole. There were deficiencies at Mayo and Aishihik, and excesses at the remaining stations in the Territory.

The Northwest Territories were cold during March. The lowest temperature reported was 55 below, recorded at both Alert and Isachsen, while the greatest temperature deficiency was 18 degrees, recorded at both Arctic Bay and Coppermine. All stations on the Arctic Archipelago experienced temperature deficiencies, ranging from five degrees in the west to sixteen degrees in the east. At Fort Resolution there was a two-degree excess, but all other stations in the mainland districts of the Northwest Territories reported deficiencies.

MARCH 1961
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.

MIN. The lowest temperature.

MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.

SUN The total hours of bright sunshine for the month.

SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
